

Mohsin Murtuza

Lead Java Developer

SUMMARY

- Over 12 years of experience in designing and developing **Java based full stack applications**.
- Designed, developed, and deployed scalable, high-performance microservices using the **Spring Boot** framework.
- Designed and implemented **scalable microservices, event-driven systems** to ensure high performance, maintainability, and seamless integration within cloud-native environments.
- Having 3 years experience in **leading development teams** (8-12 members) in agile processes and performing high level estimations, requirement analysis, sprint planning, designing, execution, testing and deployment.
- Engaged in day-to-day **coding** activities, contributing to the development of new features, bug fixes, and performance optimizations across multiple projects.
- Executed multiple **payment integration projects** (e.g., Gpay, PayNow, eGift Redemption, Campaigns and Insights).
- Worked with DevOps to design and update Jenkins pipelines and implement **Blue-Green** deployment strategies in production, for zero downtime and minimizing after-hours deployment activities.
- Implemented a CI/CD pipeline using Jenkins, Cloudformation, AWS CodePipeline and AWS CodeBuild, integrated with GitHub for streamlined software delivery.
- Developed solutions using **AWS Lambda** for serverless computing, **Kafka** for real-time event streaming, and **MongoDB** for data management.
- Conducted **code reviews** and implemented best practices to maintain high code quality.
- Improved software operational stability by automating processes and eliminating recurring issues.
- Utilized extensive knowledge in unit and integration testing to ensure robust software solutions.
- Provided training and mentorship to development team members, fostering growth and best practices.

EXPERIENCE

Sainsbury's, UK

July 2023 - PRESENT

Joined as **Java Engineer**, Promoted to **Senior Engineer** in March 2025

- Engaged in day-to-day coding activities, contributing to the development of new features, bug fixes, and performance optimizations across multiple projects.
- Led a team to implement features, including estimating changes, planning sprints, designing and overseeing the development process.
- Assisted developers in understanding and implementing user stories, ensuring alignment with business requirements and coding standards.
- Assisted the team in identifying and resolving application performance bottlenecks, optimizing code, and improving system efficiency for better scalability and responsiveness.
- Provided support during testing phases, including SIT, and user acceptance testing (UAT), to ensure feature stability and functionality.
- Attending standup calls, planning day to day progress for timely deliveries as proposed.
- Coordinated deployment activities, from development to production, ensuring smooth deployment.

Tech Stack

Java 17, Spring Boot, MongoDB, Kafka, GitHub, AWS (Lambda, ECS, Parameter Store, IAM, S3, CloudFormation, CodeBuild, CodePipeline, KMS, EventBridge and Cloudwatch).

CORE COMPETENCIES

- Technical Lead / Team Lead
- Writing Code
- Microservices
- APIs
- System Design
- Application Resiliency
- Application testing and debugging
- Test Driven Development (TDD)
- Agile Methodology(SCRUM)
- Deployment & Delivery Management
- Communication skills
- Problem-Solving
- Creative and Analytical thinking

SKILLS

Backend - Java, Spring Boot, Spring security, JPA/Hibernate, Spring Webflux, Spring Cloud.

Architecture/Design Pattern - Microservices, MVC, Event-Driven, Single Responsibility.

Cloud - AWS, PCF, GCP.

Messaging Systems: Kafka

Frontend - Angular, Ionic, Android.

Database - MySql, MongoDB, Redis, Cassandra.

Version Control - Git, GitHub, Bitbucket.

Tools - Jenkins, maven.

ACHIEVEMENTS

- Recognized for designing and implementing **blue-green** deployment strategy for Paylah App.
- Recognized for designing and creating non-production environments that enhanced developer and SDET productivity.
- Recognized for increasing application customer adoption rate from **15% to 54%** in one month by optimizing the customer enrollment module and enhancing the overall user experience.

DBS Bank, India

Jan 2019 - Apr 2023

Joined as **Senior Associate in Jan 2019**, Promoted to **AVP(Team Lead)** in Feb 2022

- Designed, developed, deployed and maintained high-performance, scalable and secure Microservices using **Spring Boot** framework.
- Led a cross functional team (8-12 members) and implemented multiple payment integration projects like Gpay, MyInfo- Paynow, Egift Redemption, Campaigns and Insights.
- Engaged in day-to-day coding activities, contributing to the development of new features, bug fixes, and performance optimizations across multiple projects.
- Assisted developers in understanding and implementing user stories, ensuring alignment with business requirements and coding standards.
- Worked with DevOps to design and update Jenkins pipelines and implement Blue-Green deployment strategies in production, minimizing after-hours deployment activities.
- Perform code reviews to maintain high code quality and adherence to best practices prior to merging pull requests.
- Owner of two domains **eGift** and **User Profile**.
- Helped Automation and Performance testing teams with environment setups.

Tech Stack

Java8, Spring Boot, MariaDB, Redis, API Gateway, Spring Security, Spring Cloud, PCF, Jenkins, Bitbucket.

L&T Infotech, India

May 2016 - Aug 2018

Joined as **Senior Java Engineer** in May 2016

- Engaged in day-to-day **coding** activities, contributing to the development of new features, bug fixes, and performance optimizations across multiple projects.
- Improved application customer adoption rate from 15% to 54% in a month by improving customer enrolment modules and enhancing application customer experience.
- Actively involved in formulating proposals of clients, defining the scope, estimating efforts to build the solution.
- Worked with programmers, engineers, and management heads and clients to identify process improvement opportunities, proposed system modifications, and new ideas/features to improve application customer experience.
- Worked with the data team to provide necessary data for the analytics dashboard.

Tech Stack

Java8, Spring MVC, Microsoft SQL Server, SVN, AngularJs, Ionic.

Oracle India Pvt Ltd, India

May 2012 - Apr 2016

Joined as **Contract QA Engineer**, Promoted to **QA Engineer (Perm role)** in Feb 2014.

- Maintained, enhanced and resolved bugs for an Application used as a test repository by an internal team.
- Reviewed requirements, specifications and technical documents to provide timely and meaningful feedback.
- Created detailed, comprehensive and well-structured test plans and test cases.
- Developed and executed automation scripts using OATS tools; built functional libraries used in Automation test packs.
- Performed thorough Regression testing along with test suits for release builds.
- Tracked quality assurance metrics, like defect densities and open defect counts and monitored debugging process results.

Tech Stack

Java, OATS.

EDUCATION

Al Habeeb College Of Engineering & Technology, Hyderabad -2010

Bachelor of Technology in Computer Science and Engineering.

PROJECTS:

Purchase Order Management (POM)
London, United Kingdom

The Purchase Order Management application is responsible for generating purchase orders for sellers using an event-driven architecture. The application is built on a serverless technology stack that includes Spring Boot, AWS Lambda, Kafka, and MongoDB.

PayLah Wallet App

Hyderabad, India.

PayLah is a digital wallet app in Singapore, with a front-end developed natively for iOS and Android platforms. Initially, its back-end was built as a monolithic application, which was later transformed into a microservices architecture using Spring Boot, Spring Security, Redis, Kafka, API Gateway, and Pivotal Cloud Foundry (PCF).

Dealer Connect

Mumbai, India

Dealer Connect is an application that enables dealers to place orders through both web and mobile platforms. The application is integrated with SAP for order processing and is built using Spring for the backend, AngularJS for the web frontend, and Ionic for the mobile app.
